Requires UK visa sponsorship

01 PROFILE

UI/UX designer with a developer's background: I design interfaces in Figma and build them in Angular, so what I design is what ships. Over four years building web applications at TXT Group and NSS Magazine, I designed two booking platforms for a hospitality client and the identity and design system of my portfolio, NightSky.

02 EXPERIENCE

LBA Consulting, a TXT Group company

Borgomanero, Italy · Hybrid

Software Developer · front end and .NET APIs — July 2026 – Present

- Contributed to the front end of a shared, documented Angular component library on DevExtreme, so every screen of a management software looks and behaves the same; new screens are now built from it.
- Contributed to a step-by-step merchant onboarding flow with validation next to each field, turning a long paper registration for POS terminals and meal vouchers into a fully online one, now in testing with selected merchants.

Software Developer · SQL and front-end focus — February 2023 – July 2026

- Designed the user flows and interface in Figma for a reservation platform covering guided visits and events across several estates, then built most of it in Angular, from booking flow to back office; still in use.
- Designed the UI and UX of a B2B portal where agents book visits for their clients instead of by phone or email, so visits are better organised; contributed to its code and designed its rebrand in 2026.

NSS Magazine (nss factory)

Milan, Italy

Junior Front-End Developer (Internship) — 2022

- Developed the front end of scroll-driven editorial and brand pages for a fashion magazine, including a GSAP page for Gucci and long-form features for Baracuta and NSS Sports.
- Developed interactive Google Maps guides that let readers find every show of Milan Fashion Week and Paris Fashion Week Men across the city.

03 PROJECTS

NightSky · Personal portfolio · identity, UX, UI and code — 2026 – Present

- Designed a portfolio whose navigation is an explorable galaxy map, with a list-view alternative, keyboard access and a reduced-motion mode, then built it in Angular.
- Created its identity and design system: a moon-and-star mark that draws itself, one colour per section checked for contrast, three type families and shared motion timings, documented in a six-step case study.

04 DESIGN & TECHNOLOGIES

Design	Figma (wireframes, mockups, prototypes, auto layout, components and variants), user flows, UI design, design systems, accessibility, Affinity Designer
Front end	Angular, TypeScript, HTML, CSS, Sass, DevExtreme, responsive layouts
Tools	Git, SQL Server

05 EDUCATION & CERTIFICATIONS

Front-End Developer Course, Epicode — 2021 – 2022

Final grade 9.1/10 · HTML, CSS, JavaScript, TypeScript, Angular

Upper Secondary Diploma in Agricultural Technology, I.I.S. G. Bonfantini, Novara — 2020

English C1, EF SET (2023) · Entity Framework Core, Udemy (2026) · Web Design (2025 – 2026) · UX/UI Design Theory (2025) · React, Udemy (2022) · IT Security, Formatemp (2022 – 2023)
